

Major Lakes Recreational Marine Facilities Study

Regional District of Central Okanagan

This is a comprehensive twenty (20) year plan and implementation strategy for marine recreational facilities on the three major lakes in the Central Okanagan. The Study involved considerable public consultation as well as presentations to five municipal councils and Westbank First Nation Council. It included a review of governance and service delivery methods in other jurisdictions. The study looked at the impacts of marine facilities on tourism and prepared an economic impact analysis of boating in the central Okanagan. The resulting “Blueprint for the Future” will provide guidance for the Region in addressing the need for publicly accessible marine facilities.
